

G. Chantladze

**An Attempt of Division the Basque Somatic Vocabulary**

Summary

Somatic vocabulary is the less changeable part of the Basque lexical fund. It has been modified very much in the dialects. We tried to divide the somatic vocabulary into izomorphic types. We distinguished six types with the help of which we shall describe dialectal vocabulary of the Basque language. The results might be approximate but such analysis give us the possibility to know which unit is izomorphic and which is allomorphic in this part of the vocabulary. We have distinguished such types in the dialects of the Georgian language too.
