CULTURE – MULTI-CONTENT COMPLEX PHENOMENON

Culture as a scientific term is used with the volume and contents to denote such multifarious concept as unity of material and spiritual values created and preserved by human beings through centuries. Culture studies, as a subject investigating the essence of culture and its inner structure, and seeking after the methods of determining its typology, is related to the history of culture as is any other general or special discipline to its own history. Culture specialists should be able to solve the complex task of transferring from abstract definitions to concrete-historical process.

The history of culture studies all the components that underline the development of social life. The world culture is being constantly filled up along with the development of each particular nation who creates her own spiritual world and values by which a nation cannot only exercise the feeling of self-dignity but preserve its creation in the common treasury of the world civilization.
