## THE FOLLOWERS OF SHE-S AND H-S+R

Like other prepositions, "she-" expresses the following relationships: a) semantic features of a preposition "she-" and a verb root coincide with each other. b) Semantic features of a preposition "she-" and a verb root are not identical (don't coincide with each other). c) the features of prepositions and directives don't coincide with each other and in the cause of it we get general semantic characteristics: the change in action and process.

The order of "she-"+h/s-ch is depended on the verb and its surroundings.

Preposition "she-" activate the function of h/s from the angle of syntax it produces indirect object with actions, which perform the general ectantive role in the direction of a subject. If h/s acts without a preposition "she-" in this case the function of "she-" and h/s coincide and enrich each other.
